

This product utilizes the powerful waste digesting abilities of special multi-cultured bacteria strains and natural enzymes. It is a blend of bacillus bacteria strains (both anaerobic and aerobic types) cultured for their ability to digest organic waste – **quickly, efficiently and without odors!** The natural enzymes quickly break down proteins, starch, carbohydrates, animal and vegetable fats & oils, and paper for the most effective waste digestion.

Regular use will establish thriving colonies of these waste-digesting bacteria to provide uninterrupted cleaning action in all drains, plumbing and septic systems. This continuous digestive action prevents accumulation of sludge, scum, grease and all other organic solids. It unclogs drains for full flow and reduced odors. In septic systems, it will eliminate solids carry-over and odors, and reduce the frequency of pump-outs. It introduces micro-organisms into the soil for improved drainage and smooth operations of drainfields or leach beds.

DIRECTIONS: The dry bacteria cultures and enzymes in this formula must be activated in warm water (85°–100°F.) **DO NOT USE HOT WATER!** Pour slurry into drains, toilets, traps, etc., to be treated.

DRAINS: To open clogged or slow drains, dissolve 5 tablespoons in 2 cups warm water. Pour into drain and allow to work overnight. For regular drain maintenance, use 2 tablespoons per week. For drains that receive large amounts of organic matter (kitchen, floor, laundry sinks and drains), use 4 to 6 tablespoons two or three times per week.

ALL PURPOSE DIGESTANT

A SCIENTIFIC BLEND OF
MULTI-CULTURED BACTERIA
STRAINS, ENZYMES AND
MICROBIAL NUTRIENTS

FOR EFFICIENT DIGESTION OF
WASTE AND THE ELIMINATION
OF ODORS IN DRAINS,
GREASE TRAPS AND
SEPTIC SYSTEMS

ALL NATURAL – SAFE TO USE

This digestant product helps to maintain free-flowing, fresh smelling conditions in toilets, urinals, drains, garbage disposals, grease traps and plumbing. The best results are obtained by adding the digestant at the end of the day or other period of lowest flow. To prevent loosened debris from causing obstructions, always begin the treatment program by treating the lower floors first. Disinfectants and harsh drain openers may kill the bacteria. Allow several hours after the use of these products, then re-treat with digestant.

GREASE TRAPS: For initial treatment, use 1 pound for each 20 cubic feet of trap capacity. Repeat this initial treatment for three weeks, then maintain with 1/2 pound per 20 cubic feet every week.

SEPTIC SYSTEMS: Use 1/2 pound for each 500 gallons of systems capacity (or 1 pound per 5 people using the system) as an initial treatment. Flush into toilet, then use 1/2 pound per month as maintenance.

To keep septic systems drainfields and leech beds operating properly, dissolve 1 pound in warm water and pour into the distribution box. Repeat this treatment weekly until flow is improved.

PIT TOILETS: To reduce odors, increase capacity, and liquefy solids in pit toilets, use 1/4 to 1/2 pound per 500 gallon of capacity. Make additions of digestant weekly. Do not use formaldehyde preservatives or disinfectants in treated soils.
